SHAMAL ALSHI

Senior Frontend Engineer · Angular Specialist

shamal.alshi@gmail.com | +91 88063 80424 | Bengaluru, India | linkedin.com/in/shamal-alshi

Senior frontend engineer with **5+ years** of deep expertise in **enterprise-scale Angular systems** for highly regulated, compliance-heavy environments. Specialized in **large-scale framework migrations**, **production performance optimization**, and **multi-tenant architecture** patterns — delivering zero-downtime migrations of live systems, measurable performance gains, and mentoring engineers through structured technical guidance. A systems thinker who designs scalable **API integration layers**, **RBAC architectures**, and component standards adopted across product teams.

EXPERIENCE

Senior Frontend Engineer

Mar 2025 – Sep 2026

Fraud Management System, Citi Bank

Wipro · Bengaluru, India

- Executed a **zero-downtime migration** of a live fraud-management system from **Angular 8 to Angular 20** — 15+ breaking-change fixes — while maintaining 24/7 uptime and **99.9%+ SLA**.
- Re-architected the application from NgModule-based to **standalone components** — a complete restructuring from the legacy module-based UI to a modern component-based architecture — cutting module boilerplate **~40%** and accelerating feature delivery.
- Replaced legacy session-cookie authentication with a **JWT-based auth flow**, implementing secure token issuance, refresh, and expiry handling across the fraud-management platform — tightening session security while eliminating repeated re-logins for 24/7 operators.
- Adopted **Angular Signals** for shared state across the case-queue and fraud-alerts modules, replacing hard-to-trace data passing through services and cutting subscription-related bugs **~60%**.
- Built a centralized **HTTP interceptor layer** handling auth token injection and error handling for **100+ microservices** API calls, cutting per-module implementation time by **~8 hours**.
- Introduced **AI-assisted engineering workflows** (GitHub Copilot, Claude, ChatGPT) across code generation, code review, test writing, documentation, and migration tooling — **reviews 40% faster, bugs down 50%+**.

Senior Frontend Engineer

Jan 2022 – Feb 2025

Relcare Platform, Hitachi Energy

Wipro · Bengaluru, India

- Executed a critical **Angular v12 → v18 migration** across **35 production modules** with 70+ deprecated dependencies — completed in **4 weeks** with zero downtime and zero regression defects; documented the migration strategy for team reference.
- Designed an enterprise-grade **scheduling component** with rrule-driven recurring logic, adopted platform-wide across 5+ product modules and external integrations.
- Built a **HttpClient service layer** standardizing request/response handling for 100+ REST/microservices API integrations, reducing per-module implementation time by **~35%**.
- Implemented service-based state management using **RxJS Subjects** and BehaviorSubjects to share state across components and modules.
- Engineered 20+ role-based dynamic form workflows using Angular Reactive Forms with conditional validation and **RBAC**, adopted daily by **150+ internal users** across 8+ countries.
- Designed the enterprise **RBAC architecture** via route guards and directive-level UI toggling; drove SonarQube remediation, resolving 10+ critical/major security vulnerabilities per sprint.
- Optimized the core dashboard for 150+ internal users through lazy loading and **OnPush change detection**, reducing initial load from ~20s to ~2s (**90% reduction**).
- Mentored **5 junior engineers** to production-ready status through structured Angular architecture workshops and hands-on code review; all mentees independently delivered feature modules within 4 weeks.

Frontend Engineer

Apr 2021 – Dec 2021

Tender Configurator, Hitachi Energy

Wipro · Bengaluru, India

- Built **15+ responsive, reusable Angular components** from Figma designs with zero rework, establishing a component pattern adopted platform-wide and cutting screen build time **~50%**.
- Developed an end-to-end **Excel import/export workflow** for tender data management, enabling batch operations that reduced data-entry time **~70%**.
- Designed a custom Angular pipe-based **i18n translation service** enabling full internationalization and supporting expansion to **6 new locales**.

SKILLS

Angular Development Angular v8–v20, Angular CLI, Standalone Components, Angular Signals, NgModules, Angular Material, Angular CDK, Custom Directives & Pipes, Dependency Injection, Reactive Forms, Template-Driven Forms, Lazy Loading, OnPush Change Detection, RxJS (Observables, Operators), NgRx (Store, Effects, Selectors), State Management

Languages TypeScript (ES6+), JavaScript, HTML5, CSS3, SCSS/SASS

Architecture Frontend Architecture, REST API & Microservices Integration, HTTP Interceptors, RBAC Design, Route Guards, Authentication Patterns (JWT, Session-based), Reusable Component Libraries

Performance & Quality Code-splitting, Bundle Analysis, Change Detection Optimization, Web Performance, Core Web Vitals, Unit Testing (Jasmine, Karma), SonarQube, Code Reviews, Secure Coding

Tooling & Practices Git, Azure DevOps CI/CD, Agile/Scrum, SDLC, Figma-to-Code, Responsive Design, Cross-Browser Compatibility, Mentoring & Technical Documentation

AI-Assisted Engineering GitHub Copilot, Claude, ChatGPT — code generation, code review, test writing, documentation, migration tooling

PERSONAL PROJECTS

- **RxJS Field Guide** — Interactive RxJS learning app with marble diagrams. github.com/shamal-alshi/rxjs-field-guide
- **ReadSphere** — Angular Signals digital library app with RxJS search. github.com/shamal-alshi/readsphere
- **JSON Form Studio** — Angular 19 app turning JSON into dynamic forms. github.com/shamal-alshi/json-form-studio

ACHIEVEMENTS

- Delivered **zero-downtime** production migrations twice — Angular 8 → 20 at Citi and Angular v12 → v18 across 35 modules at Hitachi Energy — with zero regression defects in both.
- Designed and shipped **RBAC systems** spanning two platforms, from directive-level UI toggling to route-guard enforcement, adopted daily by 150+ users across 8+ countries.
- Eliminated **60+ critical security vulnerabilities** through systematic code review and pattern standardization in a regulated compliance environment.

EDUCATION

B.E., Information Technology

2016 – 2020

Priyadarshini Institute of Engineering & Technology, Nagpur · CGPA: 8.3/10
